#### **Dissertation:**

Concrete (betony) with using the desert's sand (the fine sand / bar khan sand) as component and using the plasticizer additions.

We have got a composition of betony by using a desert's sand with plasticizer.

We improved the properties for the applications of modified sand by mineral substances of the alkali nature, in a combination to separate technology of preparation.

Results have shown significant cement saving of 25-30%.

The results were confirmed by the experimental and industrial work.
